<p>CSS is the language we use to style a Web page. It describes how HTML elements are to be displayed on screen, paper, or in other media. It can control the layout of multiple web pages. With CSS, you can change colours, fonts, sizes, and even decide where things should appear on the screen. It helps websites look clean, attractive, and easy to use. CSS has three types of styling. They are internal, inline and external styling. </p>
